

Seek a Mushroom Challenge

@Learning about Forests @leaf.global @leaf_int

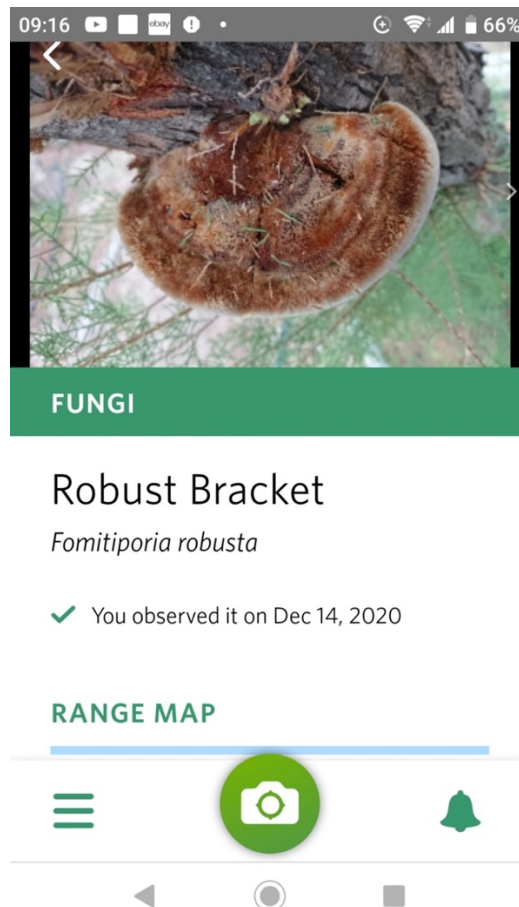

(16 November – 15 December 2020)

Kouloubri Eleni
Student of Grade 6 Class 2 (age: 11)
at the
2nd Primary School of Aradippou
Larnaca District of Cyprus

14th of December 2020

I have spotted this species in my school's garden, at a place where there is very little direct sunlight and very high humidity. I have found out that this kind of fungi is called "Bracket Robust/Fomitiporia Robusta". I have attached the exact report, exported from the Android App Seek by iNaturalist following the programme's information and guidelines.

The ecological importance of fungi is immense. They are the unseen heroes of the forests as they help trees survive and take a leading role in recycling organic materials #LEAFanywhere .

TAXONOMY

- **Kingdom Fungi**
Fungi Including Lichens
- **Phylum Basidiomycota**
Basidiomycete Fungi
- **Class Agaricomycetes**
Agaricomycetes
- **Order Hymenochaetales**
Hymenochaetales
- **Family Hymenochaetaceae**
Hymenochaetaceae
- **Genus Fomitiporia**
Fomitiporia
- **Fomitiporia robusta**
Fomitiporia robusta
